Re: Introduction of NEW Visitor and Vendor Credentialing Management Solution – **Green Security**

Trinity Health has elected to transition to a new vendor credentialing management solution to optimize the cost to serve and support essential operational restructuring across local ministries. This decision also reinforces our commitment to patient and staff safety by strengthening credentialing oversight, enhancing infection-prevention controls at our sites, and ensuring consistent policy governance and compliance across all locations.

Green Security will be replacing Intellicentrics for vendor credentialing management. Green Security will provide enhanced credentialing and comprehensive background checks for all Trinity Health vendor representatives and contractors visiting TH sites. Vendors and contractors visiting Trinity Health will be required to scan their badges at a Green Security kiosk (TH computer at entrance) and maintain an approved credential status. Vendors and contractors should be wearing their Green Security badge at all times when the transition occurs.

Trinity Health System implementation planning is underway and vendors will be provided with a tentative implementation timeline soon. We will be starting with 4 initial pilot sites for both visitor and vendor credentialing management, and then vendor credentialing management with Green Security will be onboarded to the remaining locations based on a regional schedule.

Thank you in advance for your patience and cooperation with onboarding and implementation support.
